

Buyer's Guide

Things to consider when buying a water distiller

Gallons Per Day

When deciding which water distiller is right for your specific needs, calculate the number of people that will be using the distiller and their approximate daily water consumption. Recommended daily water consumption for the average adult ranges from a half-gallon to a gallon per day. Then, find a distiller that will produce the right amount of distilled water per day.

Gallon Storage

Tanks come in various sizes, and tank size is an important part of your decision. Smaller tanks are useful for home use or in small offices. Larger tanks are useful for large office, business, or industrial use.

Auto vs. Manual Fill

Most of our distillers are auto-fill, meaning they're automatically refilled as distilled water is produced. Manual-fill models like the 30H are generally cheaper and are a great choice if you don't need an auto-filling system. You can always purchase a tank at any time in the future and convert your manual-fill distiller to auto-fill.

Specifications (be familiar with the items listed below each distiller's page)

Float Control This is a feature that regulates the water flow for all auto-fill distillers.

Volatile Gas Vent System When water is boiled in the boiling tank, organic chemicals in the water will vaporize along with the water and rise upward. The volatile gas vent is a pin hole in the top of the condensing coils that will vent these organic chemical gases off. All distillers come with this system.

Water Distillers

| Distiller | Use Type | Fill Type | People | Gal Per Day | Gal Storage | Retail Price | Our Price |
|---|----------|-----------|--------|-------------|-------------|--------------|-----------|
| Durastill 30H | Home | Man | 1-6 | 8 | NA | \$717 | \$517 |
